DiCL Scientific Coordinator - Jean Monnet Chair holder in European Innovation Policy
European University of Rome

WELCOME!

The European University of Rome (EUR) welcomes You to this series of Seminars on **Competition law enforcement in digital markets** divided into two distinct course editions (Summer 2020 / Summer 2021).

The DiCL project – Digital Markets and Competition Law is directed by **Valeria Falce**, Jean Monnet Chair in the EU Innovation Policy and Professor of Economic Law, and co-financed by the European Commission - Directorate General for Competition.

theory(ies) of

GAME, SET, MATCH

The overall **purpose** of the project is to foster a common legal and judicial culture, in order to apply in a coherent and consistent fashion the EU competition rules in the **rapidly evolving digital scenario**.

This objective will be pursued by **sharing** national judicial experience and contributing to provide them with the necessary **interdisciplinary** tools to apply competition law in the digital age in an effective manner within the European Union.

The participants will be properly guided through

- the **assessment of the competitive risks deriving from the offer of innovative web services**
- the development of **new digital platforms**
- the advancement of **Artificial Intelligence**
- the boost of the **Internet of Things** and **Big Data** as the main ground-breaking changes brought by Digitization.

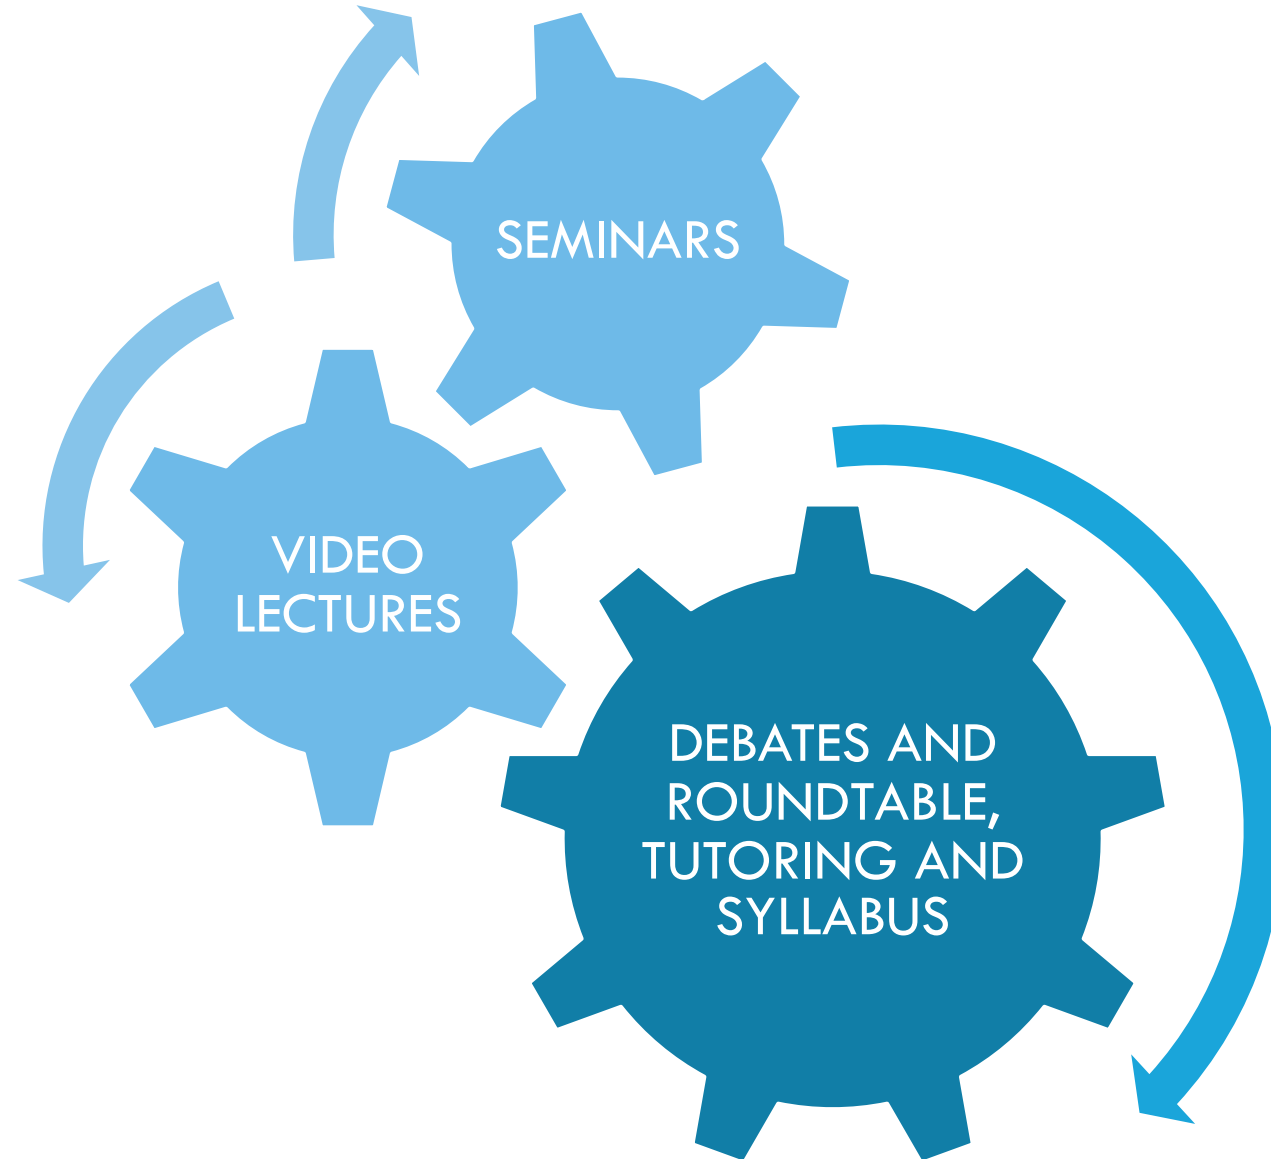

Through the Project, national judges, prosecutors, apprentice national judges and their staff will have the opportunity to further **explore and understand in depth the competitive dynamics behind the development of the Digital Age and of digital markets**, which have led to a disruptive change in the way firms operate.

MAIN TOPICS

The main issues and topics covered by training course will be:

- **market definition** in digital markets, with a specific focus on zero price markets, "*freemium prices*", as well as on two or multi-sided markets;
- **assessment of market power and dominance** in digital markets, with specific attention to the role of network effects and leap-frogging effects, dynamic efficiencies, and the role of "*private*" vs "*public*" market information;
- **recent case law and decisional practice concerning digital markets and potential theories of harm** – including new forms of collusion, (e.g., use of algorithms) and refusal to provide access to essential inputs (e.g., Big Data).
